                                                        This invention relates to novel isolated polynucleotides and methods for the therapy and diagnosis of cancer, particularly ovarian cancer. Specifically, it refers to these polynucleotides and the encoded polypeptides thereof, as well as immunogenic peptides, antibodies, antigen presenting cells (APCs) and immune system cells (e.g. T cells) that are targeted to those cells expressing the proteins of interest. The present invention describes methods that are useful for stimulating and/or expanding T cells specific for a tumourigenic protein (i.e. T cell therapy). Furthermore, compositions can be used for the diagnosis, treatment and/or prevention of ovarian cancer by stimulating an immune response in a patient. Accordingly, these compositions exhibit cytostatic activity. This polynucleotide is a human ovarian tumour antigen DNA sequence given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ADJ11252 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated ovarian tumor polynucleotide encoding ovarian tumor polypeptide, useful as probes of primers for detecting presence of in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US2003232056-A1

                                                                                                                                                                                                                                                                                                                                                       This invention describes a novel ovarian tumour protein which can be u to detecting the presence of an ovarian cancer in a patient by stimulating and/or expanding T cells specific for the tumour protein. products of the invention can also be used in a method to inhibit the development of a cancer in a patient comprising (a) incubating CD4+ and/or CD8+ T cells isolated from a patient with at least one ovarian tumour protein, such that T cell proliferate and (b) administering to patient the proliferated T cells. The cytostatic polynucleotides or polypeptides described in the invention are useful for treating or inhibiting the development of cancer, particularly ovarian cancer and stimulating and/or expanding T cells specific for a tumour protein or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotides encoding tumor proteins, treating or development of cancer, particularly ovarian cancer, and f and/or expanding T cells specific for a tumor protein.
                                                                                                                                                                                                                                                                                                       Sequence

                                                                                                                                                                                                                                                                                                                                    This invention describes a novel ovarian tumour protein which can be u to detecting the presence of an ovarian cancer in a patient by stimulating and/or expanding T cells specific for the tumour protein. products of the invention can also be used in a method to inhibit the development of a cancer in a patient comprising (a) incubating CD4+ and/or CD8+ T cells isolated from a patient with at least one ovarian tumour protein, such that T cell proliferate and (b) administering to patient the proliferated T cells. The cytostatic polynucleotides or polypeptides described in the invention are useful for treating or inhibiting the development of cancer, particularly ovarian cancer and stimulating and/or expanding T cells specific for a tumour protein or

                                          This invention relates to novel isolated polynucleotides and methods for the therapy and diagnosis of cancer, particularly ovarian cancer. Specifically, it refers to these polynucleotides and the encoded polypeptides thereof, as well as immunogenic peptides, antibodies, antigen presenting cells (APCs) and immune system cells (e.g. T cells) that are targeted to those cells expressing the proteins of interest. The present invention describes methods that are useful for stimulating and/ or expanding T cells specific for a tumourigenic protein (i.e. T cell therapy). Furthermore, compositions can be used for the diagnosis, treatment and/ or prevention of ovarian cancer by stimulating an immune response in a patient. Accordingly, these compositions exhibit cytostatic activity. This polynucleotide is a human ovarian tumour antigen DNA sequence given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated ovarian polypeptide, useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        human; ds; ovarian cancer; immunogenic; antibody; antigen presenting cell; APC; immune system cell; T cell; tumourigenic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 12; SEQ ID NO 254; 222pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to novel isolated polynucleotides and methods for the therapy and diagnosis of cancer, particularly ovarian cancer. Specifically, it refers to these polynucleotides and the encoded polypeptides thereof, as well as immunogenic peptides, antibodies, antigen presenting cells (APCs) and immune system cells (e.g. T cells) that are targeted to those cells expressing the proteins of interest. The present invention describes methods that are useful for stimulating and/or expanding T cells specific for a tumourigenic protein (i.e. T cell therapy). Furthermore, compositions can be used for the diagnosis, treatment and/or prevention of ovarian cancer by stimulating an immune response in a patient. Accordingly, these compositions exhibit cytostatic activity. This polynucleotide is a human ovarian tumour antigen DNA sequence given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           10-SEP-1999;

Sequence 1, Application US/09178109
; Patent No. 6395477
; GENERAL INFORMATION:
APPLICANT: Cockett, Mark I.
APPLICANT: Dilks, Daniel W.
APPLICANT: Chang Ling, Huai-Ping
; APPLICANT: Sokol, Patricia T.
TITLE OF INVENTION: Human Potassium Channel Polynucleotides and
; TITLE OF INVENTION: Polypeptides and Uses Therefor
; FILE REFERENCE: ahp-98089
; CURRENT APPLICATION NUMBER: US/09/178,109
; CURRENT FILING DATE: 1998-10-23
; NUMBER OF SEQ ID NOS: 4
; SOFTWARE: Patentin Ver. 2.0
; SEQ ID NO 1
; LENGTH: 2121
; TYPE: DNA
; ORGANISM: human
